

CLAIMS

I claim:

1. A paperboard object comprises of cardboards with weaved tiers covered on surface. Moreover, the paperboard object is cut into designated shape according to containers' pattern. The major characteristics are: there is stitch of the decorative edge on the trimming edge of paperboard object to fix the weaved tier and paperboard so as to strengthen the intensity of strengthened paperboard trimming edge of the strengthened paperboard object and improve the decorative function of the paperboard object trimming edge.

2. This is an edge structure of container paperboard object with weaved tier. This paperboard object consists of cardboards with weaved tiers covered on surface. Moreover, the paperboard object is cut into designated shape according to containers' pattern. The major characteristics are: an edge lace is covered in the trimming edge of paperboard object and fix the weaved tier and cardboard by stitch of paperboard object to strengthen the intensity of the trimming edge of paperboard object and further to improve the decorative function of the paperboard object trimming edge.

3. This is an edge structure of container paperboard object with weaved tier. This paperboard object consists of cardboards with weaved tiers covered on surface. Moreover, the paperboard object is cut into designated shape according to containers' pattern. The major characteristics are: the trimming edge of the designated paperboard object can span the stitch directly to fix the weaved tie on the trimming edge and the cardboard, strengthen the intensity of the trimming edge of paperboard object and improve the decorative function of the paperboard object trimming edge.

4. This is an edge structure of container paperboard object with weaved tier. This paperboard object consists of cardboards with weaved tiers covered on surface. Moreover, the paperboard object is cut into designated shape according to containers' pattern. The major characteristics are: reserve a folding edge on the designated edge of paperboard object, reversely fold the folding edge and go through the designated edge of paperboard object and the stitch of folding edge in the place of stitch to fix the weaved tier on the trimming edge and the cardboard, strengthen the intensity of the trimming edge of paperboard object and improve the decorative function of the designated edge of paperboard object.
